The error is caused by a PDF file in the Russian (RU) template folder, whose name is longer than the maximum length allowed by the file system (typically 255 characters). The issue only affects the Russian-language templates.

The exact error message is:

`'./opt/onlyoffice/desktopeditors/converter/templates/RU/Forms/[32]2CP5BPWQWTILBUMA2C7NDB6QXXIYXUFZEBB5BNORQDIYFUFY2GCNBOGQXLILBUMCEDIJJUFV2C65DDBA2CQ5BMWRR7IYFUF62CZ5BPRA2CJNBMGQXPILLUF52GBNBOGQXXILA===.pdf': Filename too long`

**Solution**

The following modifications were made to resolve the issue:

1. The DEB package was extracted.

2. All files with long names in the `RU/Forms` folder were renamed to simple, numbered names (e.g., `ru_form_01.pdf`, `ru_form_02.pdf`, etc.).

3. A new package was created with the renamed files.

4. The dependency on Microsoft fonts (`ttf-mscorefonts-installer`) was removed.

The renamed template files continue to function correctly because OnlyOffice identifies templates based on the file's content, not the file names. The application reads the internal metadata of the files, so the actual name is irrelevant for its operation.
